

« ONCE AGAIN, INNU-SCIENCE DISTINGUISHES ITSELF BY THE QUALITY OF ITS FLOOR FINISHES. »

INDOOR AIR EMISSIONS | VOC

Indoor air quality is a major public health concern. The application of our floor finishes and spry buff, particularly in the more «vulnerable» indoor spaces (hospitals, schools, centers for elderly, center of the early childhood, etc.), decreases in a very important way the negative effects on the health.

Once again, Innu-Science distinguishes itself by the quality of its floor finishes.

Indeed, in France *, these Innu-Science Floor care line products have the highest mark as for the new indoor air quality index standard.

The new French logo «Émissions dans l'air intérieur» (Indoor air emissions) will be from now on integrated on labels and any marketing document related to **MC2™**, **MC3™** and **Egäl™** in the France market.

Furthermore, this French standard is a considerable benefit for all our other markets where it will also be integrated.

* According to the Ministry of Ecology, Sustainable Development, Transport and housing decree.

0% OF VOC

Following tests made by an independent laboratory, using an analytical method of Volatile Organic Compounds (VOC) content in those same products, the Innu-Science R&D team obtained very interesting results:
MC2™, **MC3™** and **Egäl™** contain **no VOC!**

« WE ARE STEPS AHEAD ON OUR COMPETITORS IN THE MARKET. LET'S SHARE THAT WITH OUR CUSTOMERS! »
